Development
Workshops

The Parkside School
48 West 74th Street
New York, NY 10023

Space is not reserved until payment is received for workshop enrollment.

PARKSIDE INSTITUTE

Finding a way to teach every child is our mission at The Parkside School and we view outreach to the community as vitally important to our mission. To that end, we launched the Parkside Institute to offer our methods, knowledge, research and training to the community to enhance the educational experiences of children with language and learning difficulties and to encourage the replication of these services and programs. The Institute offers teachers, parents, and professionals access to Parkside's unique methodologies. We invite you to study with us.

All summer workshops will be held at:

The Parkside School
48 West 74th Street
New York, NY 10023

For further information:

institute@parksideschool.org

www.parksideschool.org

Phone: (212) 721-8888 ext. 5155

Fax: (212) 721-1547

Refund Policy

If you must withdraw from a course, you must notify the Parkside Institute **no later than 10 business days prior** to the start of the course. Upon proper notification, you will receive a refund minus a \$25 processing charge.

If you withdraw less than 10 business days prior to the start of the course, NO refunds will be made.

SUMMER WORKSHOPS

Stern Math: Structural Arithmetic Program

Part I: July 13 and July 14

Beginning concepts, addition, subtraction, problem-solving, money

A Session: 9:00 am—12:00 pm

B Session: 1:30 pm—4:30 pm

(Please select A or B on your enrollment form)

Fee: \$195

Part II: July 15 and July 16

Time, multiplication, division, problem-solving, fractions

A Session: 9:00 am—12:00 pm

B Session: 1:30 pm—4:30 pm

(Please select A or B on your enrollment form)

Fee: \$195

Instructors: Temple Ary, M.A., and KC Genzmer, M. Ed

The Structural Arithmetic Program, developed and taught by Catherine and Margaret Stern for over six decades, is a renowned standard for effective mathematics instruction. It equips teachers with a multi-sensory, structured, systematic and thorough program that gives children a strong foundation for attaining higher skill levels.

Structural Arithmetic guides children beginning their math education to discover mathematical concepts through manipulatives, develop computational facilities and enhance problem-solving abilities.

This workshop series includes demonstrations of materials and activities including games, videos and hands-on practice.

Because Parkside only offers these Stern Math workshops once during the year and enrollment is limited to 20 attendees for each session, we urge early registration.

For more information on Stern Math, please visit www.sternmath.com.

Visual Supports: A Picture is Worth a Thousand Words

Monday, July 20

9:00 am—11:30 am

Fee: \$95

Instructors: Leslie Thorne, M.A. and Albina Miller, M.A., Founding Directors, The Parkside School

The systematic use of visual supports in the classroom and at home promotes a child's language and learning. This interactive workshop will focus on strategies that help children calm their bodies, attend, follow directions, carry out routines, organize their time, complete jobs, resolve conflicts and increase their interpersonal intelligences. It is designed for regular and special educators and parents.

Constable Reading Program

Wednesday, July 22 and Thursday, July 23

9:00 am—3:30 pm

Fee: \$350

Instructors: Catherine M. Constable, M. Ed., CCC-SP, Co-Director of the Rye Learning Center and Leslie Thorne, M.A., Founding Director, The Parkside School

This two day workshop presents a reading instruction program based on speech science and information processing. The

program acknowledges the importance of phonological representation in learning to read and is used as a total literacy program from pre-school through middle elementary school children. The program differs from many well known "phonics based" reading programs in important and systematic ways. The Constable Reading Program specifies a language for instruction, as well as materials for fostering learner beliefs, and language learning competence.

The Constable Program seeks to increase student knowledge of relationships between speech production, perception and reading by identifying activities for facilitating information processing. The program distinguishes contemporary "phonemic awareness" activities that place information processing demands on children, from activities which take into account information processing constraints. The program presents the essential components of emergent literacy experience and provides activities for promoting such experience.

Other topics covered include: narrative structure, language form, vowels, letter sound relations, language of reading, book and print concepts, phonological representation, and word retrieval.
